PROFESSIONAL SUMMARY

Flutter developer who builds complete mobile apps: the app screens, the server behind them, and AI features. Built Doctor Hunt, an AI powered healthcare app with doctor booking, AI symptom guidance, medical document analysis and English/Urdu voice support, and Drips Water, a water-delivery app with an admin dashboard and a customer-support chatbot. Completed four remote app-development internships and currently pursuing BS Applied Computing at Iqra University.

EXPERIENCE

Flutter Developer Intern | *Internship Pakistan (Remote)* *Aug 2025 - Oct 2025 (Concurrent)*

- At Internship Pakistan, I built four complete Flutter apps from start to finish, including Eventify (login, offline saved events, QR code tickets).

Flutter Development Intern | *DevelopersHub Corporation (Remote)* *Jul 2025 - Sep 2025 (Concurrent)*

- At DevelopersHub, built a secure login and account system with Firebase and a task manager that updates instantly, and worked on connecting apps to online services (APIs).

Flutter App Development Intern | *Softnetix (Remote)* *Mar 2024 - Apr 2024 (Concurrent)*

- At Softnetix, built an expense-tracking app with categories, input checks, and local storage that works offline, plus a simple task-management app.

Android App Development Intern *| CodSoft (Remote)* *Mar 2024 - Apr 2024 (Concurrent)*

- At CodSoft, built two Android apps with Flutter: a live weather app that pulls data from an online service, and a quote-browsing app.

TECHNICAL SKILLS

- **Mobile:** Flutter, Dart, GetX, Provider, Hive, SharedPreferences, Responsive UI design
- **Backend & Cloud:** Firebase (Authentication, Firestore), Node.js, Express, REST APIs, Cloudinary
- **AI & Chatbots:** Dialogflow, Alibaba Cloud Model Studio
- **Practices & Tools:** Clean Architecture, Git, GitHub

KEY PROJECTS

Doctor Hunt – *AI-Powered Healthcare Platform*

- Built a full-stack healthcare platform: the mobile app in Flutter, the server in Node.js and Express, and the database and login in Firebase. Images and documents are stored in Cloudinary.
- Patients can search doctors by specialty and book, cancel, or reschedule appointments, with protection that stops the same time slot from being booked twice.
- Added AI features using Alibaba Cloud Model Studio: symptom guidance that suggests which type of specialist to see, voice interaction in English and Urdu, and analysis of uploaded medical documents.

Drips Water - *Water Delivery App*

- Built a complete water-delivery app using Clean Architecture, which keeps the code organized, easy to test, and easy to update.
- Created an admin dashboard that tracks live revenue and delivery progress, with a custom delivery scheduler and separate access levels for admins and customers.
- Added a customer-support chatbot (Dialogflow) that answers common questions automatically.

Glitz Mart - *E-Commerce App*

- Built an online shopping app with product categories, a shopping cart, and personalized greetings, connected to Firebase and an online product API.

Eventify - *Event Registration App*

- Built an event registration app featuring Firebase Authentication, fast offline-capable Hive local caching, and JSON-based QR code ticket generation and validation.

EDUCATION

Bachelor of Science in Applied Computing | *Iqra University, Karachi* *Oct 2024 - Sep 2028 (Expected)*

CERTIFICATIONS

Mobile Application Development | *Bano Qabil, Karachi* *Dec 2023*
